

## WHAT IS CLAIMED IS:

1. An image information processing system comprising:
  - a radiation image generating device for generating a radiation image;
  - an image information processing device having a function of inputting patient information, and a function of receiving said radiation image generated by said radiation image generating device and performing predetermined image processing on the received radiation image;
  - an external memory device connected to said image information processing device, for temporarily storing at least one of said radiation image received from said radiation image generating device and a processed radiation image on which said predetermined image processing has been performed by said image information processing device in relation to said patient information; and
  - an image display device connected to said image information processing device, for displaying at least one of said radiation image and said processed radiation image;
 wherein
  - said image information processing device has a function for, in case of an indication that said radiation

image is a damaged picture, making a copy of capture items which include at least said patient information and capture information relevant to said radiation image.

2. The image processing system according to Claim 1, wherein said image display device displays at least one of said radiation image and said processed radiation image in relation to said capture items.

3. The image processing system according to Claim 1 wherein said image information processing device stores said copy of the capture items in relation to at least one of said radiation image and said processed radiation image.

4. The image processing system according to Claim 1, wherein said copy of the capture items and at least one of said radiation image and said processed radiation image are stored in an image information storing device external to said image information processing system.
